   Check if bluetooth function was turn off in cellphone.
   Make sure bluetooth pen within 10 meters from cellphone.

Battery Information

Bluetooth glasses is powered by a rechargeable battery. The full performance a new battery is achieved only after two or three complete charge and discharge cycles. The battery can be charge and discharge hundred of times, but it will eventually wear out.

Recharge battery use only original default USB recharge cable. Do not leave a full charged bluetooth glasses on recharge power source. Because overcharging may shorten battery life. If left unused, a full charged battery will lose its charge over time.
